# The Robin

- Robins eat insects, berries, worms and seeds.
- They live in parks and gardens.
- If you feed a robin it will come back.

- The Robin has a red breast and face. They have a brown head, wings and tail.
- A baby robin does not have a red breast.
- In the winter a robin puffs out its chest to keep warm.

- Robins only live a few years. Many die before one year old. The oldest known robin was 13 years old.
- A robin has 5-7 chicks.
- Both parents look after the chicks.
- The baby chicks fly at two weeks old.

- The best way to attract a robin is to dig a hole in your garden.

# Spring

Wake up world I want to sing.

Winter's gone and now it's

Spring,

"Thank you God, "I want to  
sing.

Thank you God for sending

Spring.

Hello Flowers peeking through.

Hello grass so green and new.
